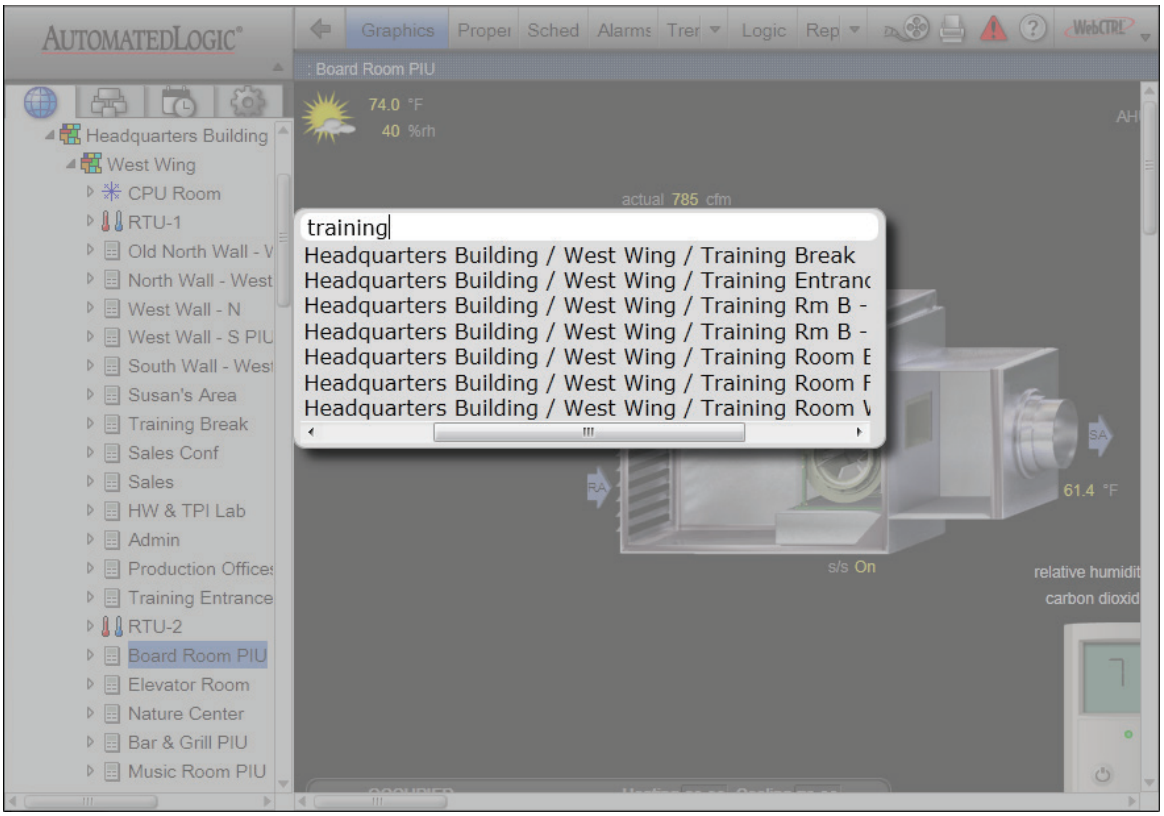
What is the JumpTo add-on?

JumpTo provides a way for you to search for WebCTRL® locations based on their display names. The search results are links so that you can quickly jump to a location in the tree. This can be very useful in big systems.

After you install JumpTo, click and then select **Find** (shortcut Ctrl+Shift+F). A search box opens where you enter the text your want to search for.



- The search is not case-sensitive.
- If you type multiple words, only locations that contain all the words will be found.
- Click on a location in the search results to go to that location in the tree.
- If you don't see the results you want, click on the WebCTRL window or press **Esc** to close the search box.

REQUIREMENT WebCTRL® v6.0 or later

To install and run the JumpTo add-on

1. Go to http://alcshare.com/content/jumpto.
2. Download **Version 0.9.5 for WebCTRL 6 and later**.
3. In a web browser, log in to your WebCTRL® system.
4. On the **System Configuration** tree > **System Settings** > **Add-ons** tab, click **Browse**, and then open the file that you downloaded.
5. Click **Install**. After a few seconds, the JumpTo add-on will appear in the **Installed** table and will be running.

   NOTE The installation process copies the add-on file that you downloaded into the **WebCTRL#.#/addons** folder.
6. Log out of the WebCTRL application, and then log in again.
